SS-WSA-BB (Big Bore) Packer

The TIW® SS-WSA-BB Whipstock Packer is a perfect option for multilateral wellbore completions. Designed to run a retrievable latch assembly, the packer allows for retrieval of the whipstock and anchor assembly. The big bore design permits the running of large-diameter tubulars with a production latch that anchors in the packer if desired, after the window and lateral have been drilled.

Features

- Permanent WS Packer
- Mechanical / Hydraulic / Wireline
- Millable
