### Double-Grip Bottom-Trip Whipstock Anchor

The TIW® Double-Grip Bottom-Trip Whipstock Anchor features bi-directional slips that resist both upward and downward movement of the whipstock. Similar to the Single-Grip Tool, the Double-Grip Anchor gives positive centering of the whipstock within the casing when in the set position. The anchor is set by tagging the bottom of the hole, or other false bottom. This anchor allows the starter mill shear bolt to be sheared in tension or compression without movement of the anchor and whipstock. This anchor can easily be converted from a permanent to a retrievable version in the field.

#### Features

- Permanent / Retrievable
- Mechanical
