EJ-IB-TC Mechanical Liner Hanger

The TIW® EJ-IB-TC Liner Hanger has an integral barrel with no internal thread connections for maximum pressure integrity. It is used to suspend a cemented or an uncemented liner off bottom. The EJ-IB-TC Liner Hanger has a staggered slip alignment which allows extra bypass and additional hanging capacity. The added bypass lessens pressure build-up during run-in and cementing, reducing the chance of damaging the pressure sensitive formations.

Features

- Limited travel on slips
- Integral barrel provides maximum pressure integrity
- Staggered slip alignment allows extra bypass and additional hanging capacity
- Available with either right-hand or left-hand jay
