Liner Hanger Systems

Liner Hanger

IB-TC-R-RRP Hydraulic Set Liner Hanger

The TIW® IB-TC-R-RRP Hydro Hanger has an integral barrel for pressure integrity with special channels milled in the slip cones that provide maximum bypass for easier running. This feature combined with a patented twin seal journal bearing is designed specially to accommodate the rotation of liners and to improve displacement efficiency and cement bonding even in tight, eccentric holes. Shear pinned to prevent premature setting, the IB-TC-R-RRP Hydro Hanger is set by seating a ball in the PDC HS-SR Landing Collar and applying pressure through the setting string.

Features

- Integral body eliminates all internal connections above lower nipple
- Staggered slip design provides maximum bypass in set position
- Accommodates the rotation of liners
- Improves displacement efficiency and cement bonding
