Liner Hanger Systems Setting Collar

LG Setting Collar w/ RPOB Profile

The TIW® LG Setting Collar with RPOB Profile combines the features of a basic releasing collar with a profile to receive the Retrievable Packoff Bushing and a Receptacle for future liner tieback. The Retrievable Packoff Bushing is retrieved with the setting tool, leaving the tieback receptacle and Setting Collar unrestricted. The LG Setting Collar with RPOB profile is recommended for liner applications requiring high pressure and a positive seal between the liner setting tool and the liner.

Features

- LG Setting Collar contains a honed bore and profile to accept the Retrievable Packoff Bushing
- Polished bore facilitates entry and seating of seal nipple when tieback is required
- The polished receptacles ID is larger than the Liner ID, providing for full opening liner tieback
- The receptacle polished bore is available in a standard length of 10 feet with optional lengths of 15 or 20 feet
