Single-Grip Bottom-Trip Whipstock Anchor

The TIW® Single-Grip Bottom-Trip Whipstock Anchor firmly anchors the whipstock within the cased wellbore to facilitate sidetrack milling operations. The anchor is run in place on the drill pipe along with the whipstock and the starter mill, and is set by tagging the bottom of the hole. The anchor is then positioned by pulling it up in the hole to the desired setting depth. Compression is applied to the drillstring to set the anchor and shear the starter mill bolt. The anchor can easily be retrieved by latching on to the whipstock and applying tension to the drillstring.
